The Maritime Technology Cooperation Centre (MTCC) Pacific supported the trial of marine solar power systems on two ships to power electricity needs, especially when in port. This resulted ...

Integrating solar technologies, like those developed by Tamesol, into maritime vessels offers a viable path toward reducing the industry's carbon footprint and operational costs.

This landmark report rounds off the Virtual Bunkering of Electric Vessels (VBEV) project, funded by the UK Government, assessing the financial, technical, and operational ...

Offshore charging stations have emerged as an innovative solution, despite increased investment and extended voyage durations. Here we develop a route-specific model ...

Bi-directional charging infrastructure is beneficial to consumers making them contributors to the grid, enhancing sustainability ...

Bi-directional charging infrastructure is beneficial to consumers making them contributors to the grid, enhancing sustainability and reducing operational costs.

The technologies and challenges in utilizing solar energy for shipping are analyzed, trends in solar energy for maritime transport are discussed, and future research directions for ...

In order to facilitate the further expansion of electric ships, the advancement of electric ship technology must develop strategies for the rational utilization

The ship energy storage system (ESS) has gained more interest from ship designers because it can store energy

Bidirectional charging of photovoltaic containers for ships

in BESS and ultra-capacitor from solar PV during off demand hours of a ship. ...

Integrating solar technologies, like those developed by Tamesol, into maritime vessels offers a viable path toward reducing the ...

This paper will review several studies and applications of solar energy as part of ship power system, and analyze the contributions in supporting reduction of carbon emissions.

Their research revealed that ships on longer routes benefit from low or zero inclination angles, whereas ships on shorter routes could optimize solar energy capture by ...
