Do you need a generator for a solar energy system?

If you have a grid-tied solar energy system without a battery backup, a separate generator is a great way to ensure access to power during a local electrical outage. While traditional generators are powered by diesel, gasoline or propane, solar generators are an alternative that runs on electricity produced by your panels.

Can I run a generator in place of my solar panels?

You can run a generator in place of your solar panels, but not at the same time since the ATS will kick in. If you have a grid-tied solar energy system without a battery backup, a separate generator is a great way to ensure access to power during a local electrical outage.

Does a solar generator need a battery?

A portable solar generator can power essential appliances, but for whole-home backup, you'll need a high-capacity system with multiple batteries and large solar panels. How long does it take to charge a solar generator? Charging time depends on battery capacity and input power.

Can a generator power a home on its own?

Generators can power your home on their own. They don't need the sun, so they can step in anytime solar isn't enough. Myron's generator serves as backup to a solar system and generally works well, especially in winter outages, but reliability concerns remain.
