Are Chinese-made solar inverters a security risk?

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy infrastructure after discovering hidden communication devices inside certain solar inverters.

Are Chinese power inverters being used on solar panels?

U.S. officials have discovered undisclosed communication devices on Chinese-made power inverters that were being used on solar panels, Reuters reported today based on anonymous sources within the federal government. The inverters are devices separate from power sources like solar arrays or batteries.

Are Chinese-made solar inverters a 'rogue' communication device?

The issue could be important to facilities managers if they oversee on-site solar arrays or battery storage systems, with Chinese-made inverters on them, to provide energy resilience. Could undocumented communication devices be in Chinese batteries?

Reuters also claimed one source revealed undocumented communication devices had been found in some batteries from multiple Chinese suppliers. The devices could provide additional, undocumented communication channels that could allow firewalls to be circumvented, according to Reuters. pv magazine cannot verify this information.

For months, experts examining renewable energy equipment imported from China have been quietly finding rogue components in solar inverters and ...

U.S. energy officials are reportedly reassessing the security risks posed by Chinese-made components in renewable energy ...

U.S. officials have discovered undisclosed communication devices on Chinese-made power inverters that were being used on solar panels, Reuters reported today based on ...
