How many wind and solar projects are there in ASEAN?

There is currently a total of 222GW of announced, pre-construction and construction-stage utility-scale wind and solar capacity in ASEAN countries, according to GEM's research. More than 185GW of this pipeline of projects is in the Philippines and Vietnam, meaning they account for more than 80% of prospective capacity in the region.

How much solar power does ASEAN have in 2023?

Credit: Quang Ngoc Nguyen / Alamy Stock Photo Solar and wind capacity in the Association of Southeast Asian Nations (ASEAN) region increased by 20% in 2023, bringing the total to more than 28 gigawatts (GW).

How much solar power does ASEAN have?

Currently, around three-quarters of its operational utility-scale solar and wind capacity comes from solar. There is currently a total of 222GW of announced, pre-construction and construction-stage utility-scale wind and solar capacity in ASEAN countries, according to GEM's research.

Will ASEAN doubling down on solar & wind projects?

"By doubling down on bringing as much of the 220GW of prospective utility-scale solar and wind projects into fruition, ASEAN countries will be poised to not only meet regional renewable energy targets, but pave the way to transition from fossil fuels."

Leaders in Southeast Asia, a region of political, geographic and economic diversity, first floated the idea of a supergrid in the late 1990s, but progress stalled for years due to the ...

It highlights the key policy shifts that have catalysed solar and wind capacity development and supported the region's broader energy transition. It also discusses the future ...

Considering the low shares of solar and wind (less than five percent) in many systems in the region, most integration impacts in the ...

Global Energy Monitor's Global Solar Power Tracker and Global Wind Power Tracker currently catalog more than 28 GW of operating utility-scale solar and wind capacity across ASEAN ...

Then, we overlaid the location estimation results to obtain the optimal combination of locations for the construction of solar panels, wind farms, and hydropower plants in ...

Utility-scale wind and solar capacity rose by 20 percent in Southeast Asia last year, as the region comprising the Association of ...

This report provides a comprehensive assessment of the readiness of Southeast Asia's power sector to integrate higher shares of ...

Utility-scale solar and wind capacity in the Association of Southeast Asian Nations (ASEAN) is up by a fifth since this time last year, and the region is on track to easily meet its upcoming ...

Utility-scale wind and solar capacity rose by 20 percent in Southeast Asia last year, as the region comprising the Association of Southeast Asian Nations (ASEAN) brought its total ...

Utility-scale solar and wind capacity in the Association of Southeast Asian Nations (ASEAN) is up by a fifth since this time last year, and the region ...

Considering the low shares of solar and wind (less than five percent) in many systems in the region, most integration impacts in the next few years can be addressed via ...

The increase in utility-scale solar and wind capacity over the past year has come as a result of a supportive policy environment across ...
