Why did energy storage surge in Q1 2025?

That makes Q1 2025 the biggest first quarter for energy storage in US history. The surge was led by utility-scale projects, which accounted for over 1.5 GW of the new capacity, a 57% jump compared to Q1 2024. Surging energy demand is putting the electric grid under strain," said John Hensley, SVP of markets and policy analysis at ACP.

Can solar power be stored in a BYD battery?

It produces solar panels for both commercial and industrial situations alongside residential rooftop solar. Electricity can then be stored in a BYD battery, such as the residential Battery-Box HVE. BYD Energy Storage and Saudi Electricity Company signed a deal in February 2025 for the world's largest grid-scale battery storage projects of 12.5 GWh.

Are solar PV and batteries the future of power?

"The combination of solar PV and batteries is today competitive with new coal plants in India. And just in the next few years, it will be cheaper than new coal in China and gas-fired power in the United States. Batteries are changing the game before our eyes." Costs and growth of solar and storage
