Can I Use my RV's solar power system while connected to shore power?

Yes, you can use your RV's solar power system while connected to shore power. When you plug your RV into shore power, it typically provides the majority of the electrical needs for your RV's appliances and systems, such as lights, air conditioning, or your refrigerator.

What kind of power do I need for my RV?

A 20-amp shore power is the most basic and provides a standard level of power, typically used for smaller RVs or those with limited electrical needs. This connection is similar to the standard household outlet you would use for small appliances like lamps or phone chargers.

Do RVs use AC or DC power?

Understanding RV electricity is crucial for every RV owner. Your RV's electrical system powers everything from lights and fans to the refrigerator and HVAC system. Unlike homes that use only AC power, RVs utilize both AC and DC components. AC power comes from shore power connections, while DC power is supplied by your RV's batteries.

What is RV shore power?

RV shore power refers to the electrical connection that allows your RV to draw power from an external source, typically at a campsite or RV park. This connection provides a stable supply of electricity for your RV's appliances, lights, and climate control systems when you're parked and not relying on your RV's battery or generator.

Learn about the three main types of power sources for RVs including shore power (electric hook up), generators, and house batteries. Get tips on how to choose the right power source for ...

RVs get electricity from batteries, shore power, generators, and solar panels. Here's how to use each source and avoid running out of electricity on your trip.

When you're plugged into a campground RV electrical pedestal (or any power source), your 12-volt battery
