-----

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be ...

A new interactive platform--the European Energy Storage Inventory --has been launched to provide near real-time insights into energy storage deployment across the EU, ...

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy ...

The EU is expected to reach gigawatt-scale hydrogen storage capacity by 2030, driven by green hydrogen projects in Germany, the Netherlands, and Spain, where it can be used both as a ...

In November, Altea Green Power began construction of a 1GW battery energy storage system project in Italy, called ~Black Bess". The project, which will consist of four sites ...

Discover the largest planned and under-construction battery energy storage projects in Europe as of mid-late 2025.

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology.

The European Energy Storage Inventory, developed by the Joint Research Centre (JRC) of the European Commission, is a new interactive platform that maps and analyzes over 1771 energy ...

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according

to the European Energy Storage Inventory, launched by the ...

This innovative tool systematically catalogizes all energy storage projects within Europe, from the first planning phase to operational operation.

If we apply the same focus and ambition to storage that we once did to solar, Europe can build a resilient, renewables-based energy system faster than many think.

There is a "healthy pipeline of projects in development" across Europe's energy storage sector, but the technologies are as yet "significantly underutilised" below their potential.
