Enter electric appliance in the dropdown menu or enter manual wattage rating in watts or kilowatts (kW) and the daily usage of the device in hours. Click the calculate button to determine the ...

Using your daily energy usage and Peak Sun Hours, and assuming a system efficiency of 70%, the calculator estimates the Wattage required for your off-grid solar system's ...

Using your daily energy usage and Peak Sun Hours, and assuming a system efficiency of 70%, the calculator estimates the ...

15kW solar systems are solar installations rated at 15,000 watts of peak capacity. This level of solar power generation is substantial: on sunny days it can typically produce ...

Estimate the amount of kilowatt-hours your solar panels can generate in a day based on factors like panel wattage, hours of sunlight per day, and efficiency. This will help you understand the ...

Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, installers and manufacturers to easily ...

1. 15 kilowatts of solar energy generate approximately 60-75 kilowatt-hours (kWh) of electricity per day, depending on several factors ...

Enter electric appliance in the dropdown menu or enter manual wattage rating in watts or kilowatts (kW) and the daily usage of the device in ...

Calculate how much power you need with these solar calculators to estimate the size and the cost of the solar panel array needed for your home energy usage.

Free electricity calculator to estimate electricity usage as well as cost based on the power requirements and usage of appliances.

Calculate electricity usage and cost with our Power Use Calculator. Estimate kilowatt-hours and energy bills easily for any device.

Number of American Homes" Electricity Use For One YearWind Turbines Running For One YearNumber of Football Fields of Solar Powered For One YearMiles Driven by An Electric VehicleAccording to the U.S. Energy Information Administration (EIA), the average annual electricity consumption for an American household in 2023 was 10,260 kWh, an average of 855 kWh per month (EIA 2024). The number of American homes is determined by dividing the annual amount of green power procured in kilowatt-hours (kWh) by 10,260 kWh.
