A variation of the expression by @Gumbo that makes use of K for resetting match positions to prevent the inclusion of number blocks in the match. Usable in PCRE regex flavours.

For example, `ab|de` would match either side of the expression. However, for something like your case you might want to use the `?` quantifier, which will match the previous ...

This MATLAB function returns indices of the matching features in the two input feature sets.

Is there a way in Python to access match groups without explicitly creating a match object (or another way to beautify the example below)? Here is an example to clarify my motivation for ...

How do I match all lines not matching a particular pattern using grep? I tried this: `grep "[^foo]"`

28 PEP 622 provides an in-depth explanation for how the new match-case statements work, what the rationale is behind them, and provides examples where they're ...

How do I create a regular expression to match a word at the beginning of a string? We are looking to match stop at the beginning of a string and anything can follow it. For ...

The value of the match attribute of the `<xsl:template>` instruction must be a match pattern. Match patterns form a subset of the set of all possible XPath expressions. The first, ...

Answer (line anchors vs string anchors) What this tells me is that `re.match` and `re.fullmatch` don't match line anchors `^` and `$` respectively, but that they instead match string anchors `A` and `Z` ...
