What is a flywheel energy storage system?

Like building blocks, single flywheel modules fit together with others to build a complete flywheel energy storage system. The system is designed to allow siting and operation at any size from 100 kW to multi-MW power blocks.

What is a beacon flywheel system?

Beacon flywheel systems are designed to require low maintenance and our modular architecture allows units to be self-contained so service issues have minimal system impact.

Why do we use flywheels?

By providing multiple cycles of kinetic energy without chemical degradation, our flywheels are uniquely suited to support the transition from fossil fuels to sustainable renewable generation.
