-----

The energy storage market in Italy saw a significant uptick in 2024, marked by a notable increase in stand-alone connections, a significant step towards the path of energy ...

"It is reasonable to expect that, when fully operational, all new renewable energy plants will already be installed with integrated storage systems. And where the market does ...

Italy is racing to meet 2030 renewables targets, but faces grid, permitting, and skills hurdles. Explore what this means for the clean ...

Italy is racing to meet 2030 renewables targets, but faces grid, permitting, and skills hurdles. Explore what this means for the clean energy workforce.

As Italy's energy mix is increasingly composed of variable renewable energy sources, electricity storage will be needed to integrate power generated by renewables into the ...

Through spatial analysis, this research shows that combining both solar and wind energy can increase the system stability and reduce the size of the required energy storage ...

The government has set ambitious goals for increasing renewable energy on the national grid, with a particular focus on bolstering both solar energy and energy storage ...

Italy recognizes that renewable energy production can be intermittent, so investing in energy storage solutions is indispensable. Battery systems and other storage technologies ...

The government aims to accelerate permitting for renewable projects and simplify environmental approvals

while boosting storage deployment to support the integration of solar and wind power.

To achieve these targets, Italy has set ambitious plans to further increase its solar and wind energy capacity. By 2030, Italy aims to produce at least 30% of its total energy from renewable ...

MACSE is a crucial piece of this puzzle, helping manage the on-off nature of renewables like solar and wind while keeping the grid stability and capacity. Terna expects 8 or 9 GW renewables ...
