Are mobile base station sites EME compliant?

The Radio Communications Licence Conditions (Apparatus Licence) Determination 2015 mandates that the operation of equipment does not exceed the general public exposure limit. All mobile base station sites are required to be approved for EME compliance. This process ensures the safety of the General Public.

 Why are base stations an inevitability?

These types of objects are an inevitability since they serve the purpose of providing signal transfer for data and voice between mobile mobiles. The idea of base stations is anchored in their function to provide coverage,capacity,and connectivity,hence allowing for extending the working capabilities of mobile phones and other radio gear.

 How does a base station work?

Base stations typically have a transceiver,capable of sending and receiving wireless signals; Otherwise if they only send the trailer it will be considered a transmitter or broadcast point only. The base station will have one or more RF antennas installed to transmit and receive RF signals from other devices.

 What are the properties of a base station?

Here are some essential properties: Capacity:Capacity of a base station is its capability to handle a given number of simultaneous connections or users. Coverage Area: The coverage area is a base station is that geographical area within which mobile devices can maintain a stable connection with the base station.

Baseband Processor: The baseband processor is responsible for the processing of the digital signals. It converts the analog signals obtained from mobile devices to digital for ...
