**What is the difference between pure sine wave inverter and modified sine wave?**

Pure sine wave inverters and modified sine wave inverters are two common types of inverters. They have some differences in working principle, performance characteristics, application field, waveform, and compatibility. Next, we will explain the differences between pure sine wave inverters and modified sine wave inverters in various aspects.

**Should I buy a modified sine wave inverter?**

When it comes to solar array inverters, you do not want to buy a modified sine wave inverter. Contrary to pure sine wave inverters, modified sine wave inverters only attempt to mimic a sine wave, which can result in regular and bad disruptions to the grid and to your experience.

**Should you use a pure sine wave inverter?**

With a pure sine wave inverter, you can safely run and charge. Pure sine wave inverters produce stable power with low harmonic distortion you can safely use with medical equipment. Such clean power output buys you peace of mind knowing that your expensive devices are safe from power disruptions.

**What is the output current waveform of a pure sine wave inverter?**

The output current waveform of a pure sine wave inverter is of high quality and can achieve low harmonic distortion when interfaced with a grid power supply.
