Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; ...

Globes of the Earth often display an analemma as a two-dimensional figure of equation of time ("sun fast") vs. declination of the Sun. The north-south component of the analemma results ...

The calculator shows two synchronized visualizations: the classic analemma figure-8 (solar declination vs equation of time) and a separate equation of time graph throughout the year.

Time of day for the calculation can be changed in the same way. Hit the "Calculate Solar Position" button. Once the calculations are complete, you may use your browser's "Print" function to ...

Globes of the Earth often display an analemma as a two-dimensional figure of equation of time ("sun fast") vs. declination of the Sun. The north-south ...

Compute the solar position from time and place using NLR's SPA.

The reason for the figure of eight analemma is the difference between the actual position of the Sun in the sky and the mean solar time ...

The reason for the figure of eight analemma is the difference between the actual position of the Sun in the sky and the mean solar time measured by your own clock.

This data service provides tables of the topocentric configuration of solar system bodies.

Compute the solar position and intensity from time and place using NLR's SOLPOS.

The calculator shows two synchronized visualizations: the classic analemma figure-8 (solar declination vs equation of time) and a ...

Azimuth is measured in degrees East of North. There are other systems, but they are less commonly used. One such system is the supergalactic system. A number of these systems ...
