-----

China is transitioning to a market-driven framework for solar energy pricing, with the change set to take effect by June 1, 2025. The National Energy Administration (NEA) has ...

This policy promotes the full market-based determination of on-grid electricity prices for new energy sources, including ground-mounted and distributed PV projects, as well ...

China's polysilicon production exploded between 2022 and 2024, creating a glut and pushing prices to unsustainable lows. But new government guidelines are now forcing ...

Solar energy is the most common, cheapest, and most mature renewable energy technology. With solar photovoltaics taking over recently, an in-depth look into their supply ...

China's solar and windfarms would no longer be guaranteed sales at a fixed price linked to coal benchmarks, under a new policy released by the central government. The policy ...

S& P Global's analysis highlights that China's new renewable energy pricing mechanism is likely to significantly enhance solar module demand and prices.

China is transitioning to a market-driven framework for solar energy pricing, with the change set to take effect by June 1, 2025. The ...

Solar power prices in China's first provincial auction under its new renewable pricing mechanism were so low they could discourage new project investments there, analysts ...

China's solar and windfarms would no longer be guaranteed sales at a fixed price linked to coal benchmarks,

under a new policy ...

China embraces market-driven pricing for solar and wind power. Explore how this shift could transform renewable energy investments today!

(Bloomberg) -- The green energy transition in China is at a critical juncture, as oversupply in the solar sector, declining power prices, and continued reliance on fossil fuels ...

China is advancing a nearly 1.3 terawatt (TW) pipeline of utility-scale solar and wind capacity, leading the global effort in renewable energy buildout. This is in addition to China's already ...
