We'll break down SOC vs. voltage, fix charging issues, and share pro tips to keep your LiFePO4 or lead-acid battery in top shape. Plus, we've got charts and a handy formula to make it crystal ...

During periods of poor weather when solar energy is reduced, BatteryLife will dynamically raise the Low SoC limit which has been set. This has the effect of making less power available for ...

Performing an SOC calibration involves setting protection limits, discharging and charging the battery to these limits, and allowing the system to rest. Here's how to do it step by ...

Learn what SOC (State of Charge) means in a solar system, how battery SOC impacts performance, and how to monitor the state of charge of the battery for better efficiency ...

We'll break down SOC vs. voltage, fix charging issues, and share pro tips to keep your LiFePO4 or lead-acid battery in top shape. Plus, we've got ...

Setting the wrong daily SOC limits for backup is a frequent error that can lead to premature battery degradation and a system that fails when you need it most. This article ...

There is a Max SoC setting but it only applies to charging from the grid, if there is enough solar PV available the battery will charge to 100% from it. There's two MinSoC ...

This determines the maximum state of charge you want to allow the battery to reach when charging from the grid. The setting in the above diagram ...

The idea is to maximize battery life by charging everyday to 90% (or set a equivalent charge voltage limit), and once a month do a full charge to let the BMS balance the ...

This determines the maximum state of charge you want to allow the battery to reach when charging from the grid. The setting in the above diagram indicates that during the charging ...

There is a Max SoC setting but it only applies to charging from the grid, if there is enough solar PV available the battery will charge to ...

BMS shut off voltages can be set by design and/or software. The BMS in a good battery should shut down long before their battery damage or insufficient voltage to recharge ...
