Here, we will delve into our path taken to launch a completely new business and start operation of the first large-scale energy storage facility in Japan in 2024, as well as the challenges and ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more ...

Solar power has become the largest source of clean energy in Japan this year. Interest among households has been strong, with more than 3mn residential solar systems ...

By 2030, official estimates show variable renewable energy reaching 20% of Japan's power mix. Noting the demand case and ever ...

By fiscal 2026, Japan plans to establish a dedicated market for trading electricity stored in residential batteries. This move will create ...

Since December 2023, companies have announced investments of at least \$2.6 billion in Japanese battery storage projects, ...

GSSG Chikuden will use the investment to support its development, construction and operation of utility-scale battery energy storage systems ("BESS") across Japan's power grid.

Since December 2023, companies have announced investments of at least \$2.6 billion in Japanese battery storage projects, according to calculations by Reuters.

Japan's energy storage landscape is shifting, pushed by household demand, corporate ESG mandates, and domestic battery manufacturing. The residential lithium-ion ...

The government is also reforming its battery energy storage system (BESS) regulations, with batteries set to play an important role in maximizing renewable energy supply and avoiding ...

Here, we will delve into our path taken to launch a completely new business and start operation of the first large-scale energy storage facility in Japan ...

By fiscal 2026, Japan plans to establish a dedicated market for trading electricity stored in residential batteries. This move will create opportunities for virtual power plants ...
