What conductive substrates can be used for solar cells?

Solaronix provides a variety of conductive substrates suitable for Perovskite Solar Cells, Dye Solar Cells, or any other photo-electrochemical devices. Our fluorine-doped tin oxide (FTO) coated glasses ensure optimal adhesion of printed layers, a primary requirement for electrode fabrication.

What are the characteristics of glass for solar applications?

For solar applications the main attributes of glass are transmission, mechanical strength and specific weight. Transmission factors measure the ratio of energy of the transmitted to the incoming light for a specific glass and glass width. Ratio of the total energy from an AM1-5 source over whole solar spectrum from 300 - 2,500nm wavelength.

How much solar energy does commercial glass produce?

Base-line commercial glass has a solar transmission of 83.7%. I.e. 16.3% of the sun's energy do not even get to the PV material. The energy loss is due - in equal parts - to reflection on the surface and absorption within the glass due to iron impurities. The density of glass is about 2,500 kg/m³ or 2.5kg/m² per 1mm width.

Which float glass is best for solar energy conversion?

Glass for maximising solar energy conversion. Pilkington Optiwhite(TM) is a range of extra clear low-iron float glass products with very high solar transmittance, offering improved solar energy conversion and consistent performances.

Solaronix provides a variety of conductive substrates suitable for Perovskite Solar Cells, Dye Solar Cells, or any other photo-electrochemical devices. ...

Solaronix is active in the area of renewable energy and has a leading position in the development of new photovoltaic cells imitating natural photosynthesis. In particular, the dye sensitized ...

NSG TEC(TM) is a group of products, including a comprehensive range of TCO glass (Transparent Conductive Oxide coated glass), optimised to suit a ...

Solaronix provides a variety of conductive substrates suitable for Perovskite Solar Cells, Dye Solar Cells, or any other photo-electrochemical devices. Our fluorine-doped tin oxide (FTO) ...

NSG TEC(TM) is a group of products, including a comprehensive range of TCO glass (Transparent Conductive Oxide coated glass), optimised to suit a variety of thin film photovoltaics, with ...

Solar applications require flat glass. So-called Pattern Glass is mostly used as front glass in crystalline modules, whilst float glass is used for both substrate and back glass in thin-film ...

Our extra clear solar glass offers superior solar energy transmittance and is stable under solar radiation. It also survives harsh environmental conditions and protects the sensitive ...

Indium Tin Oxide (ITO) Conductive Glass is a transparent conductive substrate widely used in optoelectronic applications. It offers high optical transparency, excellent electrical conductivity, ...

StonyLab conductive glass with FTO & ITO coatings for solar cells, sensors & displays. High transparency, low resistance. 10% off 1st order, free US ...

In addition to the generation of electricity, our glass products are also used in solar applications that generate hot water. We have been closely associated with the leading companies within ...

StonyLab conductive glass with FTO & ITO coatings for solar cells, sensors & displays. High transparency, low resistance. 10% off 1st order, free US shipping, 24/7 service.

With its very high solar energy transmittance, our low iron glass Pilkington Optiwhite(TM) is the ideal cover plate for a range of solar technologies, including Thin Film Photovoltaics, Concentrated ...
