The multinational effort was Burundi's first substantial energy generation project in over three decades, and the 7.5-megawatt solar field is the country's first utility-scale solar ...

The pioneering 7.5MW solar PV plant has increased Burundi's generation capacity by over 10% and is the country's first substantial energy generation project to go online in over three ...

Burundi's first solar PV power plant has reached commercial operation. Located in Mubuga in the Gitega Province, the project - which is the ...

The renewable energy facility is Burundi's first-ever solar plant to connect to the country's national grid. The solar PV plant has increased Burundi's generation capacity by ...

The six-year process of developing and building Burundi's first solar plant was led by Gigawatt Global, an award-winning green energy developer and independent power ...

The renewable energy facility is Burundi's first-ever solar plant to connect to the country's national grid. The solar PV plant has increased ...

The Gigawatt Global plant is a game-changer for Burundi's energy landscape. It has helped to reduce the country's reliance on imported diesel fuel, which is expensive and ...

Thanks to the project in Mubuga, the electricity generated by the solar field has been able to replace significant power coming from diesel, expanding output to new users.

This power station is the first grid-connected solar project developed by an IPP in Burundi. It is also the first

major electricity generation investment in the country, in the past 30 years.

Thanks to the project in Mubuga, the electricity generated by the solar field has been able to replace significant power coming from ...

Burundi's first solar PV power plant has reached commercial operation. Located in Mubuga in the Gitega Province, the project - which is the country's first grid-connected solar project by an ...

This power station is the first grid-connected solar project developed by an IPP in Burundi. It is also the first major electricity generation investment in the country, in the past 30 years. The renewable energy infrastructure was on the books since 2016. Attempts were made to start construction in 2018, but the process aborted. In January 2020, construction started in earnest. Despite delays attributed to the COVID-19 pandemic, the power installation was commercially c...
