-----

In short, you can indeed run power to a container - either by extending a line from the grid or by turning the container itself into a mini power station using solar panels.

When looking at the process with `ps ax`, the stat column is `Dl`, which means `uninterruptible sleep (usually IO)`. Is it possible to find out more details on what the process is ...

With three times the power of a single phase uninterruptible power supply (UPS), and load-balancing capabilities, three phase UPS are the most efficient way to deliver industrial backup ...

In short, you can indeed run power to a container - either by extending a line from the grid or by turning the container itself into a mini ...

Integrating necessary power equipment such as transformers, switchgear, energy storage units and control modules into a transportable compact container, it can quickly and ...

A process performing I/O will be put in D state (uninterruptable sleep), which frees the CPU until there is a hardware interrupt which tells the CPU to return to executing the ...

For Linux `defunct` and `zombie` processes are the same. From `man ps`: Processes marked `<defunct>` are dead processes (so-called `zombies`) that remain because ...

An uninterruptible process is a process which happens to be in a system call (kernel function) that cannot be interrupted by a signal. To understand what that means, you need to understand ...
