-----

0 return value is the normal value which is returned by your method. Where as out parameter, well out and ref are 2 key words of C# they allow to pass variables as reference. The big difference ...

But a parameter accepts an argument, so it is an argument that is accepted, not a parameter. And if anything, an argument is given in a call to a parameter (or at least, some ...

If you are passing a variable into a template parameter with the intention of using it as part of another runtime expression, the easiest method is to copy the parameter to a variable.

This means that ? will be the prefix of the parameter, but if you already have ? in urlString, than & will be the prefix. I would also recommend to do `encodeURIComponent( paramvariable )` ...

EDIT: I got a message from Databricks" employee that currently (DBR 15.4 LTS) the parameter marker syntax is not supported in this scenario. It might work in the future ...

powershell.exe itunesForward.ps1 Is it possible to pass an argument from the command line and have it applied in the script instead of the hardcoded 30 seconds value?

A parameter is text that is added to a command to change how the command works. The word &quot;parameter&quot; generally refers to both the parameter name and parameter value.

To assign a value to a switch parameter when calling a function or script you use a slightly different syntax to regular parameters - if you want it to be false you can just omit it, ...

`exec my_stored_procedure "param1Value", "param2Value"` The final parameter is an output parameter.
